Election/Restrictions

1. The requirement for restriction is withdrawn due to Applicant's amendment filed 20 July 2005.

EXAMINER'S AMENDMENT

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Michael Perrson on 1 August 2005.

The application has been amended as follows:

In the claims:

17. (Amended) A device for holding an object, said device comprising:

a base;

at least three posts affixed to and extending from said base, said posts disposed substantially equidistant from a center reference point;

at least three followers, wherein each of said followers is pivotably attached to one of said posts and comprises a gripping portion for gripping the object, wherein each of said gripping portions is a non-deforming pin attached to each of said followers;

at least three linkages dimensioned to rotationally link each of said

followers such that each of said followers is directly connected to at least two linkages and
movement of one of follower causes all of said followers to pivot
synchronously; and

an adjustable actuator in communication with said followers, said actuator
being shaped and dimensioned to cause said followers to rotate about said posts;

wherein said followers and linkages are dimensioned and disposed such
that a movement of one follower causes each of said followers to pivot in unison about
said posts such that said gripping portions remain in substantially equidistant relation
from the center reference point regardless of a degree of rotation of said followers.

Allowable Subject Matter

3. Claims 1, 4-9, 12-22 are allowed.

The following is an examiner's statement of reasons for allowance: The prior art neither anticipates nor renders obvious a device for holding an object as claimed, specifically wherein the combination of limitations include the actuator comprises a nut rotationally attached to one of the linkages and a threaded fastener disposed in communication with the nut (claims 1 and 9); or at least three linkages dimensioned to rotationally link each of the followers such that each of the followers is directly connected to at least two linkages and movement of one of the followers causes all of the followers to pivot synchronously (claim 17).

The closest prior art US Pat. No. 4,828,297 (Link et al.) as is discussed in detail in the previous office action.

Regarding claims 1 and 9, the incorporation of allowable subject matter into the independent claims is as discussed in the previous office action.

Regarding claim 17, '297 does not disclose the at least three linkages dimensioned to rotationally link each of the followers such that each of the followers is directly connected to at least two linkages and movement of one of the followers causes all of the followers to pivot synchronously.

Therefore '297 does not anticipate the claimed inventions.

Furthermore, there is no prior art, either alone or in combination with '297 that would render obvious the claimed inventions, and no motivation found to modify '297 to obtain the claimed inventions.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
